email

1 This archive accompanies the anonymous workshop paper. It contains the sealed 61-row table, the
2 frozen protocol file, and the pre-registration (including the logistics-exclude sentence). It does not
3 recompute AUC.

4 1 Sealed per-task table

5 $n=61$ (53 go / 8 no-go). go iff $\Delta_{\text{full}} > 0$. BIRD and APPS are not rows: excluded
6 for logistics, before any label existed. Deltas are the sealed JSON companion of
7 ANALYSIS_RESULTS.md. Base pass@1 values are the display-rounded figures from the sealed run
8 reports (see comments in supplementary/table61.tex).

Table 1: Sealed $n=61$ table (go $\Leftrightarrow \Delta_{\text{full}} > 0$).

9 2 Frozen protocol

10 Byte copy of the production protocol. Never edited after freeze. The listing is the yaml file in this
11 archive (supplementary/protocol_v2.yaml).

12 3 Pre-registration

13 Copies of the analysis contract and its supplement S1–S5 live
14 in this archive as supplementary/ANALYSIS_PREREG.md and
15 supplementary/ANALYSIS_PREREG_SUPPLEMENT.md. The honesty clause is unchanged:
16 AUC non-significant = publish negative. Campaign-close sample is $n=61$.
